

# Australian Tinnitus Association (ATA)

The Australian Tinnitus Association (ATA) would like to inform you of a clinical research study being conducted by **Jay Piccirillo, MD** at the Washington University in St. Louis.

This study can be completed remotely through a Smartphone and was open only to tinnitus patients in the USA. However, on request from the ATA the researcher has agreed to include participants from Australia.

Dr. Piccirillo is conducting a research study to test a new way of measuring your tinnitus bother using Smartphone technology.

The entire study will be completed on your Smartphone and computer. No payment for your participation is provided.

You might qualify to participate if you:

- Are between the ages of 21 and 80 years old
- Have tinnitus (for at least 6 months)
- Are bothered by your tinnitus
- Have a Smartphone with internet access

The study consists of:

- A Pre-screening Survey – to see if you may qualify (about 5 minutes)
- A Baseline Survey asking about your tinnitus.
- 4 short surveys (less than 3 minutes for each survey) per day for two weeks
- One short survey (about 5 minutes) at the end of the Ecological Momentary Assessment [EMA] survey and again two weeks later
- 4 short surveys (less than 3 minutes) per day for two more weeks.
- Final survey (about 5 minutes)

To see if you qualify for this study, visit <http://j.mp/1sY0uHKM> or email Joyce on [NicklausJ@ent.wustl.edu](mailto:NicklausJ@ent.wustl.edu)

*NB: The Australian Tinnitus Association is promoting the clinical trial for informational purposes only. The ATA is neither a sponsor nor an organizer of the trial, which is wholly coordinated by Washington University in St. Louis.*
